

# Asset Management Reform: Emerging Issues

Wednesday 21<sup>st</sup> September, 2005 5:30 - 8.00pm

## Learning Objectives and Outcome

On completion of this seminar, you should have achieved the following learning objectives and outcomes:

- An awareness of international trends in clinical care pathways and emerging technology that supports health service delivery
- An awareness of trends in appropriate physical design for facilities of the future
- An understanding of emerging issues in health facilities design from patient, technology & physical planning perspectives

The following tasks should be undertaken after attendance at the seminar. A reading list and set of references has been supplied as part of the Seminar learning material. This reading list (also available on our website [www.fbe.unsw.edu.au/chaa](http://www.fbe.unsw.edu.au/chaa) by following the eResources link) provides a useful information source which will assist you in undertaking the tasks.

We recommend that in addition to these set tasks that you use the reading list and references as a source of material for independent study.

## Assessment Tasks

- 1 Viewed from a client’s perspective, list the issues that you consider are most critical to health facilities design.

---

---

---

---

---

---

---

---

- 2 Highlight an international trend which could impact your own workplace activities.

---

---

---

---

---

---

---

---

3 Note some of the current technological advancements that could be used to improve health facility procurement.

---

---

---

---

---

---

4 Consider if your role in 5 years time is likely to be considerably changed by the use of technology to streamline processes and outcomes?

---

---

---

---

---

---

5 In your view, what are some of the ways clinical care pathways are changing?

---

---

---

---

---

---

6 Summarise your views on future directions in clinical care

---

---
